

## 2010 Quality Assurance Workshops

In 2010, the IAG made further progress in its efforts to provide the geochemical community with access to the latest concepts in quality assurance and laboratory best practice. Three one-day workshops were held on three different continents in conjunction with major national or international meetings. The venues were: Knoxville, USA (13 June 2010); Canberra, Australia (9 July 2010); and Münster, Germany (23 September 2010). These workshops have become a key source of up-to-date information for geoanalysts wishing to assure the reliability of their data or who seek a deeper understanding of metrology theory as applied to the analysis of Earth materials.
